PROFESSIONAL SUMMARY

Data Analyst with hands-on internship experience delivering SQL-driven analytics, ETL workflows, and business-ready dashboards across relational, cloud, and semi-structured data sources. Skilled in data cleaning, EDA, data validation, data modeling, and translating raw data into KPIs and insights that drive decisions. Proficient in SQL, Python (Pandas, NumPy), Power BI, Tableau, and Excel, with a strong foundation in statistical analysis and automated reporting. Adept at partnering with business, engineering, and ML stakeholders in cloud-oriented environments (AWS, GCP, Snowflake).

TECHNICAL SKILLS

Languages & Querying: SQL (Joins, CTEs, Window Functions, Aggregations), Python (Pandas, NumPy), Bash, Advanced Excel, DAX (basic)

BI & Visualization: Power BI, Tableau, Matplotlib, Seaborn, JavaScript-based dashboards, Jupyter Notebook

Data Engineering & ETL: ETL/ELT Workflows, Data Ingestion, Incremental Loads, Data Validation, Data Cleaning, Schema Management, Data Modeling, Data Warehousing

Analytics & Statistics: Exploratory Data Analysis (EDA), Statistical Analysis, KPI Definition, Trend Analysis, A/B Testing concepts, Feature Engineering

Databases & Warehouses: PostgreSQL, SQL Server, Snowflake, MongoDB, Parquet, Partitioning Strategies

Cloud & Platforms: AWS (S3, Glue), GCP, Snowflake, Firebase, Linux / Unix, macOS

Tools & Workflow: Git/GitHub, VS Code, CI/CD fundamentals, Cron / Task Schedulers, Agile collaboration

Machine Learning (Applied): Data Preprocessing, Feature Engineering, Model Experimentation, TensorFlow (fundamentals)

PROFESSIONAL EXPERIENCE

Goods Unite Us — Software Intern

Sep 2025 – Present

Data Analytics & Pipeline Support

NJ, USA

- Built SQL-driven data pipelines and analytical datasets by joining relational databases and cloud storage, enabling business stakeholders to access reliable batch and near real-time KPIs across key product domains.
- Designed modular ETL/ELT workflows to ingest, clean, and model structured and semi-structured data, applying partitioning and incremental-load strategies that reduced query latency and improved reporting performance.
- Performed Exploratory Data Analysis (EDA) and data validation on large datasets using Python (Pandas, NumPy) and SQL, identifying anomalies, duplicates, and null patterns that improved downstream data quality and analyst trust.
- Automated recurring data refreshes and validation checks using Python and Bash on Linux, implementing logging and alerting that cut manual monitoring effort and accelerated issue resolution for failed jobs.
- Partnered with cross-functional analytics, engineering, and ML teams to conduct root-cause analysis on data discrepancies, implementing permanent fixes that strengthened data pipeline reliability and reduced incident frequency.
- Managed analytical code and SQL transformations through Git-based workflows and code reviews, contributing to CI/CD, automated testing, and linting standards across shared data assets.

Webdaddy — Python Developer R&D Specialist Intern

Aug 2024 – Feb 2025

Reporting, ETL & Analytics Automation

India

- Developed SQL queries and Python-based data processing scripts to unify data from APIs, flat files, and relational databases into clean, analytics-ready datasets for business reporting and KPI tracking.
- Diagnosed data integrity, query performance, and reliability issues by applying systematic debugging, SQL query tuning, and log analysis, eliminating recurring data discrepancies in downstream reports.
- Built reusable Python modules for ETL/ELT, data cleaning, and transformation logic, standardizing shared libraries and documentation that improved analyst productivity and consistency across reporting workloads.

- Automated scheduled data refreshes and reporting workflows with Python, Bash, and cron on Linux, increasing throughput of analytical pipelines and freeing stakeholders from repetitive manual pulls.
- Collaborated with research and engineering partners on feature engineering and data preparation for ML experiments, designing validated training datasets and tracking key metrics to support measurable iteration.

Findem, Inc. — R&D Data Analyst Intern

Jul 2023 – Dec 2023

Analytics, Data Quality & Reporting

Bengaluru, India

- Delivered analytics support by writing SQL queries and building data access endpoints (FastAPI, Django) that powered internal dashboards and partner-facing reports, enabling self-serve insights for business users.
- Maintained Linux-based data processing applications and monitoring dashboards, tuning resource usage and observability to improve data throughput, freshness, and reliability of analytical datasets.
- Executed data cleaning, validation, and feature engineering on structured datasets to produce high-quality inputs for reporting and ML use cases, standardizing preprocessing checks across experiments.
- Applied Git-based branching, code reviews, and version control across analytics projects, reducing integration conflicts and improving the reliability of shared SQL and Python assets.
- Contributed to cloud-hosted analytics workflows by integrating with cloud storage and reporting components, supporting migrations and optimizations on modern data platforms such as Snowflake and S3.

PROJECTS

Recipe Health Dashboard | Python, Pandas, Data Visualization

- Built an interactive analytics dashboard on recipe nutrition data, surfacing KPIs such as calorie density, macro ratios, and health scores to drive user-facing insights.
- Performed EDA and data cleaning on nutrition datasets, standardizing units, handling missing values, and engineering derived metrics for consistent, comparable reporting.
- Designed reusable data preparation and visualization layers, enabling rapid iteration on filters, segments, and chart types without reprocessing raw data.

Google Analytics 4 (GA4) Analytics Pipeline | Python, SQL, KPI Reporting

- Engineered a Python-based analytics workflow on GA4 data, extracting session, user, and event metrics to produce trend reports and executive-ready KPI summaries.
- Modeled raw GA4 exports into analysis-ready tables, applying segmentation and cohort logic to measure engagement, retention, and funnel conversion.
- Automated recurring refreshes and data validation checks, ensuring freshness and accuracy of metrics before downstream dashboards and stakeholder reviews.

CSV Analyzer | Python, Pandas, Data Quality & EDA

- Developed a Python tool that profiles arbitrary CSV files, auto-generating schema, null ratios, distributions, and outlier flags to accelerate exploratory data analysis.
- Implemented automated data validation and cleaning routines (type coercion, duplicate detection, missing-value handling) that cut repetitive data-prep effort for analysts.
- Produced summary statistics and visual diagnostics to help stakeholders quickly assess data quality before reporting or modeling.

Netflix Movies & TV Shows Analysis | Python, Pandas, Matplotlib, EDA

- Conducted end-to-end EDA on 8k Netflix titles, surfacing trends across genres, release years, ratings, country mix, and content type using Pandas and Matplotlib.
- Cleaned and transformed catalog metadata, handling missing directors, cast, and country fields and deriving calculated features for deeper segmentation.
- Visualized top-line insights in clear charts and narrative summaries, translating raw data into business-style observations on content strategy.

EDUCATION

New Jersey Institute of Technology

2024 – 2025

Master of Science, Data Science

Newark, NJ, USA

Sri Chandrasekharendra Saraswathi Viswa Mahavidyalaya

2019 – 2023

Bachelor of Science, Computer Science

India
